250,000 sweat glands excrete up to a half-pint of moisture daily.

of people have corns/calluses

have fungal foot infections

of diabetics will have damage to their feet

have ingrown toenails

feet

We use our feet **everyday** so we need to keep the skin healthy! Maintaining balanced **HYDRATION** is essential to avoid dry skin & other uncomfy skin conditions.

The **thickest skin** on your body is under your heels measuring **1.4mm deep.**

The skin on the top of your foot has almost **NO FAT** underneath!

The soles of your feet are one of the most nerve-rich parts of your body.

The skin on the sole of the foot is attached to your body extremely tight in comparison to other parts of skin. You can easily demonstrate this by pinching the skin at the top and bottom of your foot and comparing the two.
