SUNSECT
INSECT REPELLENT / SUNSCREEN
NO BITES! NO BURN!

Used by the U.S. Military since 1999! Now available to everyone!

In an attempt to create a repellent/sunscreen that can be used together, Sunsect® created a monster – a super-charged insect repellent and a world-class sunscreen!

Oil-based insect repellent and water-based sunscreen don't mix. Use them together and they can deactivate each other by up to 50%. Using the same technology designed to make women's mascara waterproof, Sunsect was not only able to combine repellent and sunscreen without deactivation, but dramatically enhance performance as well!

Insect repellent is more important today than ever before. Every time you turn around there's another insect-borne disease making the news. Zika virus, West Nile disease, Lyme disease, malaria, encephalitis, Denge fever, Lassa fever, Leishmaniasis, Chikungunya and more.

At the same time, sunscreen is more important today than ever before. Doctors tell us that, thanks to the Earth's compromised ozone layer, we can now suffer sunburn in as little as 20 minutes. And, we've learned that over 90% of skin cancer is caused by exposure to the sun's ultraviolet radiation.

Here's the problem. When used together, insect repellent and sunscreen deactivate each other by up to 50%!

Who knew?

Actually, four doctors knew. Four doctors who were avid outdoorsmen discovered this fact two decades ago and set out to develop a combination product that worked without deactivation. Repellent is oil based and sunscreen is water based. The deactivation problem resulted from mixing oil and water together.

Then the four doctors got lucky. They were connected to the women's makeup world and the technology used to make waterproof mascara. Essentially, this technology, which we call Molecular Suspension, introduced a special new emulsifier that surrounds the repellent (DEET) molecules, allowing them to suspend indefinitely in the water-based sunscreen. Thanks to this new technology, the repellent and sunscreen could co-exist without deactivating each other.

Not only did Molecular Suspension technology allow the repellent and sunscreen to be used together without mutual deactivation, it also made the repellent last almost three times longer!

The insect repellent in Sunsect is DEET, the only insect repellent that actually works. And it's one that works on a huge number of different biting insects. DEET repels insects because they detest the smell. DEET works through basic evaporation. A problem with DEET is that it evaporates quickly, necessitating high concentrations and frequent reapplication. Amazingly, suspending the emulsifier-surrounded DEET molecules in the sunscreen slowed evaporation and effectively created

a time-release scenario. So, Sunsect, with just 20% DEET, lasts longer than repellents with much higher concentrations. Plus, because the DEET is suspended in the sunscreen, there is far less potential for any absorption into the skin.

Sunsect is a long-lasting, unscented, non-greasy, clear-drying sunscreen that is extremely water-resistant!

The introduction of the special emulsifier also added a tremendous amount of water resistance to Sunsect. The number-one reason sunscreens fail is because they are washed away by either water or sweat. Sunsect resists such washing away as well as or better than any other sunscreen.

Sunsect is also non-greasy, so it's perfect for anyone holding a fishing rod, paddle, golf club or any other implement.

Hunters love Sunsect because it's scent-free. Fishermen love it because it won't harm bait. And everyone loves it because Sunsect goes on thick, lasts a long time and dries clear! Plus, it's safe for children.

Used by the U.S. military. Now available to the general public.

Only since 2014 has Sunsect become available to the general public. Trusted by the U.S. Military since 1999, Sunsect repels mosquitoes, ticks, no-see-ums, black flies, gnats, chiggers, chitres, and virtually every other disease-carrying or biting insect.

Also, Sunsect has no expiration date. Almost two decades later, the Sunsect in the few remaining original containers is still as effective — both as a repellent and as a sunscreen — as the day it was made. Another result of the emulsifying technology!

Replaces two products so it actually costs less.

With just one container to keep with you in your truck, tackle box or golf bag, Sunsect is as convenient as it gets! And by replacing two products — your insect repellent and your sunscreen — you save money. So, even as a premium product, Sunsect costs less!

And, **Sunsect is proudly made in the USA!**

THE SUNSECT BETTER-TOGETHER GUARANTEE

IF SUNSECT ISN'T THE BEST INSECT REPELLENT AND/OR SUNSCREEN YOU'VE EVER USED, SEND IT BACK (FULL OR EMPTY) AND WE WILL REFUND YOUR FULL PURCHASE PRICE, NO QUESTIONS ASKED.
